Subject: RE: Wolff-Alport FS Report
Date: Friday, April 21, 2017 10:33:38 AM

Thank you for the opportunity to review the draft Feasibility study dated March 31, 2017.

Comments from NYS DOH Bureau of Environmental Radiation Protection, general review and review of radiological related sections, for consideration:

In general the path forward, alternative process options considered and/or dropped from consideration appear to be justified and prudent.

Overall, it does not appear there was or will be follow up thoron measurements despite it appearing thoron was a consideration/driver for NPL assessment.

Pg 1-19, subsection 1.9 'risk' may need to be added between 'ecological' and 'assessment'

Pg 1-24 1.10 data gaps bullets and elsewhere (such as 3.2.1.1) where potentially intrusive work may be performed in areas of contamination above screening levels in the future it may be prudent to have work restrictions and requirements to utilize a site management plan, health and safety plan and specify a NY State licensed or agreement state licensed (with reciprocity) provider be used to assess conditions and provide oversight.

Pg 3-3 3.2.1.2 2nd paragraph: were additional radon measurements accomplished with the DurrIDGE equipment and were results disclosed to the daycare and/or school? Be advised reported radon results in NY State must be from a NYS Environmental Laboratory Approval Program (ELAP) certified laboratory.

Section 5 – references-

Consider listing the US EPA Citizen's Guide.... as a reference as it is referred to in the text.

Please let us know if additional information is needed.
